Course Evaluation

- The following is information is required to be presented to the students in class, at the first lecture.

- Every course has an evaluation by the students, conducted at the end of the course.

- The instructor is required to summarize the information in that evaluation in a report.

- The students in the class are supposed to select someone to review that report and comment on its accuracy.

- The administration has not provided any information on how the students are supposed to pick this person.

- So, a request for volunteers is made.

  - If one student volunteers, that person will be the reviwer.
  - If more than one student volunteers, a reviewer will be chosen in consultation with the director of studies.
  - If no one volunteers, the course evaluation will be completed without a student reviewer.
