---

---

## Design sammanfattning

- Vad är design?
  - Domain Driven Design
  - Process: Evolutionary Design
  - Designprinciper
  - Design Patterns
- 
- Vad är arkitektur?
  - Process: Kandidatarkitekturen
  - Architectural Patterns
  - Dokumentation
  - UML

---

---

---

---

---

---

---

## Grundläggande Designprinciper

- Abstraction
- Decomposition and modularization
- Coupling and Cohesion
- Encapsulation and information hiding
- Completeness and primitiveness (DoD)
- Consistency (Ubiquitous language)

---

---

---

---

---

---

---

## Grundläggande Designprinciper

- Reveal Intent - *Naming*
- SRP: Single Responsibility Principle
  - One and one reason only to change
- DRY: Don't Repeat Yourself
  - Duplication: Missed opportunity for abstraction!
- Simple design
- YAGNI: You ain't gonna need it!

## TDD:

---

---

---

---

---

---

---

## Vad betyder TDD?

---

---

---

---

---

---

---

Vad betyder TDD?

Test Driven Development?

Test Driven Design?

Test Driven Documentation?

---

---

---

---

---

---

Test Driven

Driven av test → test först!

---

---

---

---

---

---

Test Driven Development

google define: development

“act of improving by expanding or  
enlarging or refining”

---

---

---

---

---

---

## Test Driven Design

google define: design

"the act of working out the form of something"

---

---

---

---

---

---

---

## Test Driven Documentation

google define: design

"manuals describing the operation and use of programs"

Uncle Bob:  
"My documentation is formal, it compiles! How about your documentation?"

---

---

---

---

---

---

---

## TDD – hur gör man?

---

---

---

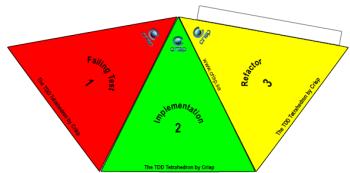

---

---

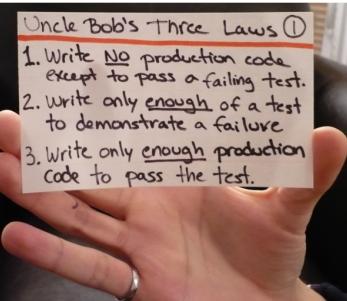

---

---

## TDD Tetrahedon

• <http://blog.crisp.se/perlundholm/2010/03/16/1268773204083.html>

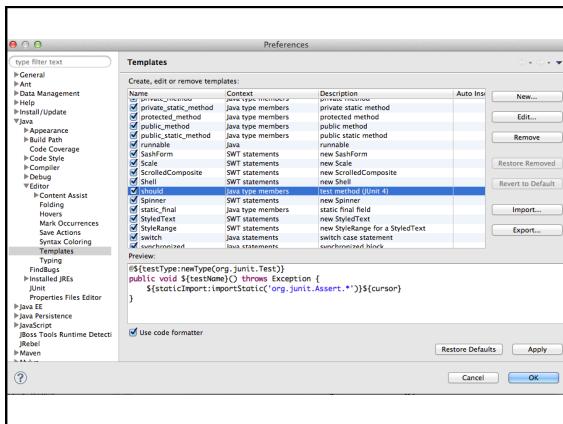

<http://blog.briandurice.com/2008/03/14/three-index-cards-to-easily-remember-the-essence-of-test-driven-development/>

## Live Coding: WordWrap

denna är en lite längre mening

→(10)

denna är en  
lite längre  
mening

## TDD – varför?

## Design och Kvalitet

- Scope – Definition of Done
- Safe refactoring
- Coding by Intention
- Incremental Design
- Loose coupling – easy to test
- High cohesion – easy to test
- ...

## TDD - kodkvalitet

- Hög täckningsgrad →
- Trygg refaktorering →
- Frihet att refaktorera kod →
- Modifierbarhet →
  - Yrkesstolthet
    - Jag vill inte leverera undermålig kod
    - Jag vill ha frihet att skapa "clean code"

---

---

---

---

---

---

---

## Test first

- Design
  - Safe refactoring
  - Coding by Intention
- Dokumentation
- Kvalitet
- Regressionstester
- Continuous Integration
- Continuous Delivery

---

---

---

---

---

---

---

## Test after

- Design
  - ~Safe refactoring
  - ~~Coding by Intention~~
- Dokumentation
- ≈Kvalitet
- ~Regressionstester
- ~Continuous Integration
- ~Continuous Delivery

---

---

---

---

---

---

---

## No tests?

- Design?
  - Safe refactoring
  - Coding by Intention
- Dokumentation
- Kvalitet?
- Regressionstester
- Continuous Integration?
- Continuous Delivery?

---

---

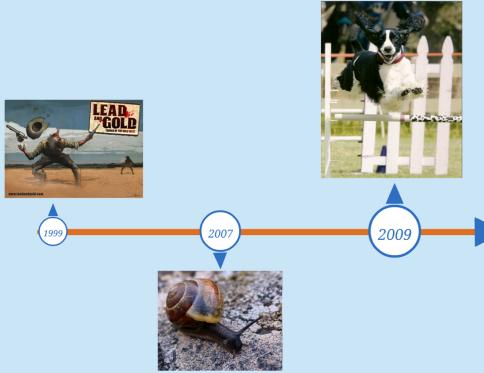

---

---

---

---

---

---

---

---

---

---

---

---

## TDD – varför gör du det inte?

---

---

---

---

---

---

---

## TDD – varför inte?

Press att leverera snabbt

Tar lång tid

Måste fortfarande testa ”rätt saker”

[http://butunclebob.com/ArticleS\\_UncleBob\\_GreenWristBand](http://butunclebob.com/ArticleS_UncleBob_GreenWristBand)

---

---

---

---

---

---

---

## TDD och kvalitet

- Studier visar tydligt på ökad kvalitet
  - Pre-release defect density 40-90%
  - 2.6-4.2 times lower number of defects
  - Passing 18% more blackbox tests
  - Etc

<http://biblio.gdinwiddie.com/biblio/StudiesOfTestDrivenDevelopment>

---

---

---

---

---

---

---

## TDD och tidsåtgång

- Studier visar inte tydligt på minskad tidsåtgång
  - 15-35% increase in initial development time
  - No increase
  - etc
- Men vad händer sen?

<http://biblio.gdinwiddie.com/biblio/StudiesOfTestDrivenDevelopment>

---

---

---

---

---

---

---

## Vad är ett bra test? FIRST!

- Fast
- Isolated (independent)
- Repeatable
- Self verifying
- Timely
- Next slide...

---

---

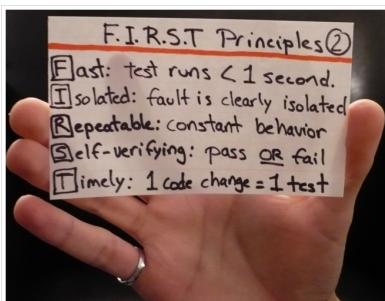

---

---

---

---

---

<http://blog.briandurico.com/2008/03/14/three-index-cards-to-easily-remember-the-essence-of-test-driven-development/>

---

---

---

---

---

---

---

## Guidelines

- Keep tests clean!
- One Assert per Test (at least minimized)
- Single Concept per Test

---

---

---

---

---

---

---

## Uncle Bob on privates

- #1 Don't test private or protected methods.
- #2 Testing trumps privacy
  - Make private methods package protected
  - Or extract into own class
- #3 Testing privates implies a design error

---

---

---

---

---

---

---

## Pair Programming

- Driver-Navigator
- Ping Pong TDD
  - <http://coderetreat.org/facilitating/activities/ping-pong>
- Promiscuous Pairing and Beginner's Mind
  - <http://csis.pace.edu/~grossman/dcs/XR4-PromiscuousPairing.pdf>

---

---

---

---

---

---

---

## Pairing – Varför?

- Better design
- Better decisions
- YAGNI
- Quality
- Learning
- Satisfaction
- Economics
  - +15% time
  - 15% defects

---

---

---

---

---

---

---

## Kata

- Sätt rätt rörelsemönster i ryggmärgen

---

---

---

---

---

---

---

## Shu-Ha-Ri

- Shu
  - Focus on practice – start forming habit.
- Ha
  - Learn underlying principles and theory behind technique.
- Ri
  - Decide for yourself, adapt to your particular context

<http://martinfowler.com/bliki/ShuHaRi.html>  
Alternativ: [http://en.wikipedia.org/wiki/Dreyfus\\_model\\_of\\_skill\\_acquisition](http://en.wikipedia.org/wiki/Dreyfus_model_of_skill_acquisition)

---

---

---

---

---

---

---

## Dags för kata!

- String Calculator Kata
  - <http://osherove.com/tdd-kata-1/>
- Ping Pong TDD
  - <http://codereview.org/facilitating/activities/ping-pong>
- PreReqs:
  - JUnit

---

---

---

---

---

---

---

## String Calculator

The following is a TDD Kata- an exercise in coding, refactoring and test-first, that you should apply daily for at least 15 minutes (I do 30).

### Before you start:

- Try not to read ahead.
- Do one task at a time. The trick is to learn to work incrementally.
- Make sure you only test for correct inputs. there is no need to test for invalid inputs for this kata

#### String Calculator

- Create a simple String calculator with a method int Add(string numbers)
  - The method can take 0, 1 or 2 numbers, and will return their sum (for an empty string it will return 0) for example " " or "1" or "1,2"
  - Start with the simplest test case of an empty string and move to 1 and two numbers
  - Remember to solve things as simply as possible so that you force yourself to write tests you did not think about
- Remember to refactor after each passing test
- Allow the Add method to handle an unknown amount of numbers
- Allow the Add method to handle new lines between numbers (instead of commas).
  - the following input is ok: "1\n2,3" (will equal 6)
  - the following input is NOT ok: "1\n" (not need to prove it- just clarifying)
- Support different delimiters.
  - to change a delimiter, the beginning of the string will contain a separate line that looks like this: "/[delimiter]\nnumbers..." for example "/[\n]12" should return three where the default delimiter is ','.
  - the first line is optional, all existing scenarios should still be supported
- Calling Add with a negative number will throw an exception "negatives not allowed" - and the negative that was passed if there are multiple negatives, show all of them in the exception message

---

---

---

---

---

---

---

---

---

---

# Dependencies?

---

---

---

---

---

---

# Test doubles

---

---

---

---

---

---

---

## Test doubles

- F - Långsamma tester
- I - Ej isolerade
- R – Sköra

---

---

---

---

---

---

---

## Test doubles

- Driv fram interface – implementera senare

---

---

---

---

---

---

---

## Test doubles

- Exempel med Mockito
- OrderServiceTest

---

---

---

---

---

---

---

## Mockito

- Mockito Maven-coords
 

```
<dependency>
        <groupId>org.mockito</groupId>
        <artifactId>mockito-all</artifactId>
        <version>1.10.19</version>
    </dependency>
```

– <http://mvnrepository.com/artifact/org.mockito/mockito-all/1.10.19>

---

---

---

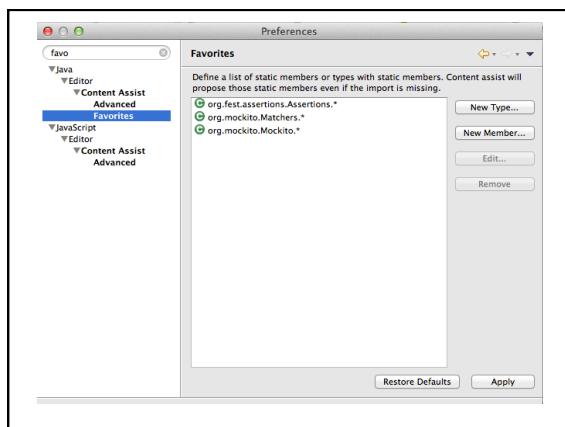

---

---

---

---

---

The screenshot shows the Eclipse IDE Preferences dialog with the 'Favorites' section selected under 'Content Assist'. The 'Favorites' list contains three entries: 'org.fest.assertions.Assertions.\*', 'org.mockito.Matchers.\*', and 'org.mockito.Mockito.\*'. There are buttons for 'New Type...', 'New Member...', 'Edit...', and 'Remove'.

---

---

---

---

---

---

---

---

### Kata: Log-interface till StringCalculator

- Utgå från StringCalculator.

1. Logga resultatet med log.info varje gång add() anropas. Test först!
2. Om log.info slänger exception så ska det propagera ut från add().

---

---

---

---

---

---

---

---

## TDD – typer av test

- Pyramiden
  - Utforskande tester 5%
  - UI-test (Webtest etc.) 10%
  - Integrationstest 20%
  - Komponenttest 50%
  - Enhets-test 100%

---

---

---

---

---

---

---

---

## Sköra tester

- Interface sensitivity
  - UI
- Data sensitivity
  - Live data
- Context sensitivity
  - Time/Date/Memory/Network/OS/Hardware
- Overspecification
  - Något vi inte avsett att testa förändras

---

---

---

---

---

---

---

---

## Filmtips

The Magic Tricks of Testing by Sandi Metz 32 min  
<https://www.youtube.com/watch?v=URSWYvyc42M>

För tips om hur man undviker sköra tester

Message	Type	Query	Command
Origin			
Incoming		<b>Assert result</b>	<b>Assert direct public side effects</b>
Sent to Self		<b>Ignore</b>	
Outgoing			<b>Expect to send</b>

---

---

---

---

---

---

---

---

## Underhåll testerna

- Tester slås av när de är i vägen
  - Om de tar för lång tid
  - Om de är sköra
  - Om man inte kan lita på dem
- När tester slås av lämnas systemet oskyddat
- Exempel: UI-tester med live-data

---

---

---

---

---

---

---

## Underhåll testerna

- Lösning
  - Fallerande tester är ”stop the line”-händelser
  - Refaktorera sköra tester
  - Refaktorera långsamma tester

---

---

---

---

---

---

---

## Other stuff

- Code Retreat
- TDD as if you meant it

---

---

---

---

---

---

---

## TDD as if you meant it

The rules for TDD as if you meant it are:

1. Write *exactly one* new test. It should be the smallest test which seems to point in the direction of a solution.
  2. Run the test to make sure it fails.
  3. Make the test from (1) pass by writing the least amount of implementation code you can *IN THE TEST METHOD*.
  4. Refactor to remove duplication or otherwise as required to improve the design. Be strict about the refactorings. Only introduce new abstractions (methods, classes, etc) when they will help to improve the design of the code. Specifically:
    1. ONLY Extract a new method if there is sufficient code duplication in the test methods. When extracting a method, initially extract it to the test class (don't create a new class yet).
    2. ONLY create a new class when a clear grouping of methods emerges and when the test class starts to feel crowded or too large.
  5. Repeat the process by writing another test (go back to step #1).

<http://coderetreat.org/facilitating/activities/tdd-as-if-you-meant-it>

---

---

---

---

---

---

---

---

---

---

## Sammanfattning

- Skriv kod först efter failande test!
  - Test → Code → Refactor
  - Clean Code
  - Clean Tests  
  - (Exempel på katornas lösningar finns på <https://github.com/jonananas/tdd-workshop>)

---

---

---

---

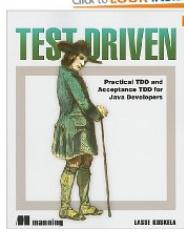

---

---

---

Läs!
